

Split your students in to groups of two. One student gets a red crayon and the other gets a green crayon. Each group of two students is given a dice. They take turns rolling the dice and color in the number of hats they roll with their crayon. When the game board is all colored, the game is finished. The student who has the most hats colored wins. Or you can change the rules and say the student who has an odd number of hats colored wins or a student who has the least hats colored wins...
